

Customers all over the world can rely on our bespoke papers that can be used in the production of scratch cards and phone cards.

These papers have a unique, confidential code which the customer reveals, usually with a coin.

Innovation is our watchword, **constantly reviewing and redesigning** to ensure that your products can never be compromised.

SECURITY FEATURES

The coating

- Smoother paper with controlled absorbency, improving the look, feel and durability.
- Specialist coatings allow additional bespoke security features to be added.
- Customers can add further layers of protection; such as security inks and affixing holograms and foils.

Opacifying layer

- A coloured opaque layer to prevent the fraudulent 'read through' of the secure code.

Security numbering

- Numbers can be printed onto the coating and then over-printed with a scratch-off layer, usually by silkscreen.

To prevent accidental removal, we have added an anti-scratch, print receptive layer.

To find out more about our complete range, please see the enclosed 'security features' card, or contact us.

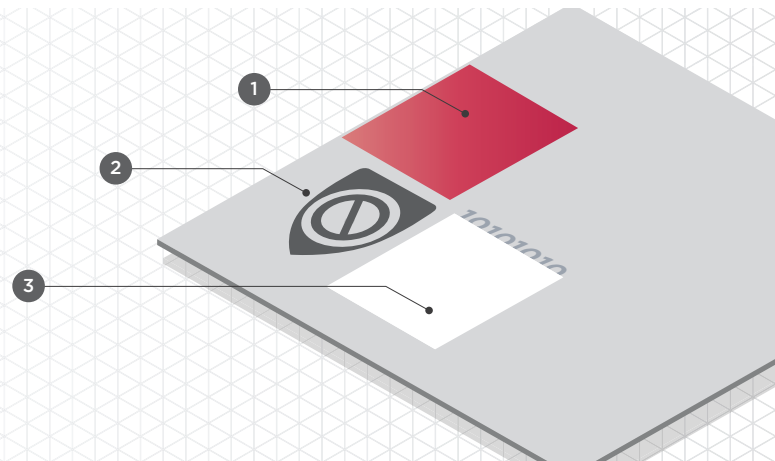

COMPONENTS

- Available in a range of substances.
- Base paper.
 - High quality paper board.
 - Available in a range of basis weights.
 - FSC accredited.
 - Clay coated.
 - Manufactured to ISO 9001 standard.

1. Scratch resistant coating

2. Tamper-proof assembly

3. Opacifying layer

**BENEFITS**

- It is ideal for mobile phone top-up cards and scratch cards.
- Low basis weight paper is more cost effective than using laminated board.
- Excellent print results with flexo (UV and water based), water based inkjet (opaque coated side only), offset litho, letterpress, silkscreen and gravure.

HOW DO YOU WANT YOUR PAPER?

- Industry leading converting equipment guarantees exceptional finish and accuracy for your product.
- Temperature and humidity controlled environment ensures stable and flat sheets.
- 2 Metre coating width or 1600mm max for laminates or precision sheet.
- Bulk or ream wrapped.
